Hosting University:

Our Mission

Hosting-U is an online resource for SPLA partners to learn how to adopt and deploy the Windows Hosting platform and management solutions. We're here to help you grow your businesses and share knowledge in new ways.

Overview

Knowledge is more important now than ever. With Microsoft Hosting-U, partners can find out how to extend Windows hosted infrastructure and communicate Windows platform offerings. At Hosting-U, you can download the latest Windows platform literature and find the tools and business accelerators you'll need.

Simpler is Better.

By simplifying the process for finding useful information, Microsoft's Hosting-U portal is a robust combination of platform and product education. Use Hosting-U to market your business, and keep up-to-date with new product information when it is released.

The Power of “3”

Simple. Intuitive. Informative.

Build
DEVELOPER & HOSTING TOOLS

Manage
SERVER MANAGEMENT

Scale
CLOUD COMPUTING

Hosting-U was built to be informative, useful, and engaging. Your starting point are Hosting University’s 3 spheres of knowledge, which take you to separate knowledge bases for key information on how to Build, Manage and Scale — using Microsoft tools and the Windows platform.

“Build” Sphere

Build DEVELOPER & HOSTING TOOLS

The Build sphere takes you to the most current Microsoft Web creation tools, providing detailed information on design tools such as Microsoft Expression Studio, and server tools including IIS Server 7.0, SQL Server 2008, and Windows Server 2008 Hyper-V.

“Manage” Sphere

Manage SERVER MANAGEMENT

The Manage sphere takes you to the most up-to-date tools for managing knowledge and systems. It contains solutions for operations, infrastructure, and more. System Center products and solutions can help capture and aggregate knowledge and Windows Server 2008 Hyper-V can optimize functionality and reduce costs.

“Scale” Sphere

Scale CLOUD COMPUTING

The Scale sphere brings you to information on the most current tools for improving server and system performance and reliability. Learn how SQL Server 2008 can manage and store rich media documents, System Center can build easier to automate systems, and Windows Server 2008 Hyper-V provides increased speed and functionality.

Product information always updated.

A large part of what makes Hosting-U beneficial is that every consumable asset – be it product information or platform collaterals - will be updated automatically. Hosting-U is dynamically connected to central databases at Microsoft. So, when new information is published, Hosting-U is immediately updated . Receiving product information that's never outdated and always current will keep you in the know.

How the Web works now.

The Web connects businesses in new ways, and Hosting-U can help you stay informed and engaged while using all the Microsoft tools now available. We've made this Web site to make your life easier, and we invite you to explore and share.

Looking to the future.

Hosting-U is a living portal that will keep evolving from the moment it is launched. New content and materials will be added regularly, and customized user experiences will be incorporated into the site.

Be a part of the future of Hosting-U.

What makes Hosting-U unique is the simplicity of the experience, and the dynamic nature of publishing information. As future iterations of Hosting-U are launched, we will listen and learn from you and your feedback.

Please take a moment and let us know how Hosting-U can be an even better resource for you, your teams and partners, and your business by emailing us at Support@Hosting-University.com

Thank You
